Chen Yi-Yen

陳　羿　言

I make interactive installations and real-time visuals, often building the circuits, the software and the installation myself.

我做互動裝置與即時影像，電路、程式到現場架設，多半自己動手。

MFA TECHNOLOGY ART, NTHU · 2026
CYY.YI.YEN@GMAIL.COM · GITHUB.COM/CYIYEN

Works 2020–2026

I make interactive installations and real-time visuals. My three MFA works asked one question: what physically has to happen for a message to arrive. The last of them, Beacon Silence, carried seven channels of sound over Li-Fi circuits I built, and was shown at VA Hub, Taipei, in July 2026. I have also worked on other people's productions: stage video for a theatre piece, the opening and ending of a fulldome showcase, image content and installation for one work in LuxuryLogico's exhibition at MoCA Taipei, and system testing for a sound installation at C-LAB. I mostly work in TouchDesigner, Unity, Blender and Arduino.

我做互動裝置與即時影像。碩士期間的三件作品圍繞同一個問題，一則訊息要送達，中間得經過哪些物理條件。最後一件《Beacon Silence》用我自己做的 Li-Fi 電路傳送七聲道聲音，2026 年 7 月在台北 VA Hub 展出。個人創作之外，我也參與團隊和其他創作者的製作，包括劇場演出的舞台影像、穹頂成果展的開場與結尾、豪華朗機工在台北當代藝術館個展中《日光域》的影像生成與布展，以及 C-LAB 一件聲音裝置的系統測試。平常最常用 TouchDesigner、Unity、Blender 和 Arduino。

SKILLS

REAL-TIME & GENERATIVE

TouchDesigner (POP, GLSL), Unity, StreamDiffusion, fulldome pipelines, multi-screen playback

3D & PRODUCTION

Blender, Maya, 360°/fisheye rendering, stage and venue modelling, Premiere, Ableton Live

PHYSICAL COMPUTING

Arduino, custom PCB, sensors, lasers & Li-Fi, DMX, motorised mounts, camera tracking

TEAM PROJECTS

Stage video for a theater performance, fulldome opening and ending, exhibition image content and installation

01 · 2026 · INTERACTIVE SOUND INSTALLATION · LI-FI

Beacon Silence

Seven laser beams each carry one part of the music. Block a beam and that part goes quiet.

七道雷射各傳一個聲部，人擋住哪道光，哪個聲部就安靜。

Beacon Silence

Seven laser beams each carry one part of the music. Block a beam and that part goes quiet.

七道雷射各傳一個聲部，人擋住哪道光，哪個聲部就安靜。

Seven green laser beams cross a dark corridor. Each carries one part of the same piece of music to a solar panel on the far wall, which turns the light back into sound. Only when all seven arrive is the piece complete.

Visitors do not need to do anything. A body walking in blocks one beam or another, and that part drops out. There is no ideal listening spot; what each person hears depends on where their body is.

The more people there are, the quieter the corridor gets. With all seven beams blocked, the room is full and the music is gone. I call this moment fading rather than failure: the system is still running, and what is left to hear is silence.

暗走道裡橫著七道綠色雷射。每道光各載著同一首曲子的一個聲部，打到對面牆上的太陽能板，再還原成聲音。七道光都到了，曲子才是完整的。

CONCEPT

Practice-based MFA thesis on the materiality of message transmission

HARDWARE

custom PCBs, laser modules, solar receivers, motor rails, Arduino

SOFTWARE / SOUND

7-channel composition, audio-to-light modulation, web 3D simulator

SHOWN

VA Hub, Taipei, July 2026 · project site with simulator

MEDIUM LI-FI (VISIBLE LIGHT COMMUNICATION), LASER, SOLAR CELL, CUSTOM PCB, ARDUINO

SETUP 7 LASER BEAMS · 7 AUDIO CHANNELS · 6.5 × 2 M CORRIDOR

SOUND 7-PART ABSTRACT COMPOSITION, 3′22″

ROLE CONCEPT, ELECTRONICS, COMPOSITION, SPATIAL DESIGN (SOLO WORK)

SHOWN Unseen Circuits, VA HUB, TAIPEI, 1–3 JULY 2026 · MFA THESIS WORK, NTHU

A visitor walking the corridor crosses one beam after another; each step changes what is heard.

Standing, walking, crouching: wherever a body is, some beam is blocked.

Transmitter: 12 V green laser module modulated by the audio signal.

02 · 2025 · TACTILE SOUND / VR INSTALLATION

Paper Shell Echo

紙殼迴聲

No loudspeaker: the sound comes from the cardboard shell itself, with dome imagery in the headset.

沒有喇叭，聲音靠紙殼本身的振動傳出來；頭盔裡播放穹頂影像。

Paper Shell Echo

No loudspeaker: the sound comes from the cardboard shell itself, with dome imagery in the headset.

沒有喇叭，聲音靠紙殼本身的振動傳出來；頭盔裡播放穹頂影像。

Dome shows surround the body with sound, but the path that sound takes, from speaker to dome surface to seat, usually goes unnoticed. Paper Shell Echo shrinks the dome into a cardboard shell you lie down and rest your head in.

There is no loudspeaker. Linear resonant actuators set into the shell turn the audio into vibration, and the cardboard itself becomes the sounding surface. Part of the sound reaches the ears through the air; part comes through the back of the head where it rests against the shell.

The VR headset plays 360° content: my fulldome opening and ending from the 2024 Future Vision Lab showcase, replayed inside a virtual dome I wrote for this piece.

穹頂展演用聲音包圍整個身體，但聲音從喇叭、穹幕到座位的這段路，觀眾通常不會注意到。《紙殼迴聲》把穹頂縮小成一個紙板殼，讓人躺下來，把頭放進去。

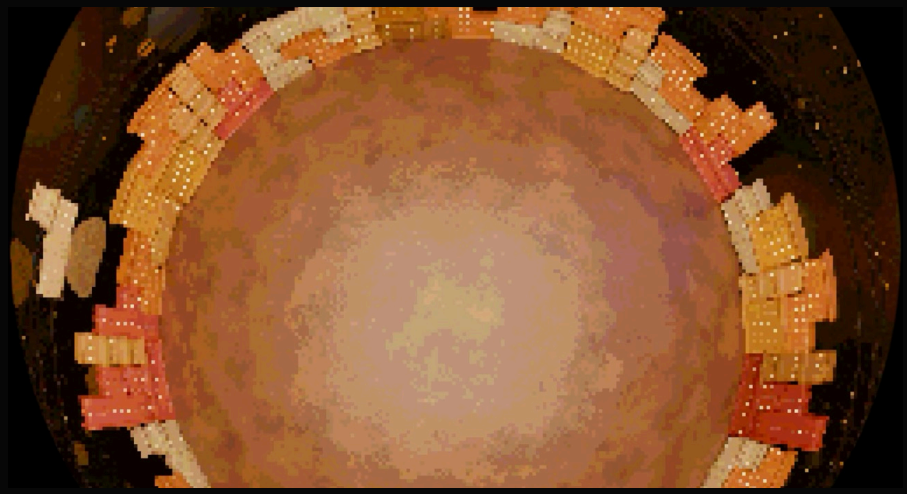

CONCEPT	BUILD	CONTENT	RECOGNITION
Sound conduction as a material interface	Cardboard structure, Taptic Engine LRA array, Bluetooth audio receiver	My FVL 2024 fulldome opening/ending, replayed in a custom virtual dome simulator	CGW 2025 Honorable Mention (artwork track)

MEDIUM CARDBOARD ENCLOSURE, TAPTIC ENGINE LINEAR ACTUATORS, BLUETOOTH AUDIO, VR HEADSET, 360° VIDEO

FORMAT SINGLE-VISITOR, LYING DOWN, ~4 MIN

ROLE CONCEPT, STRUCTURE, ELECTRONICS, 360° CONTENT

SHOWN CGW 2025 (COMPUTER GRAPHICS WORKSHOP), TAIPEI — HONORABLE MENTION

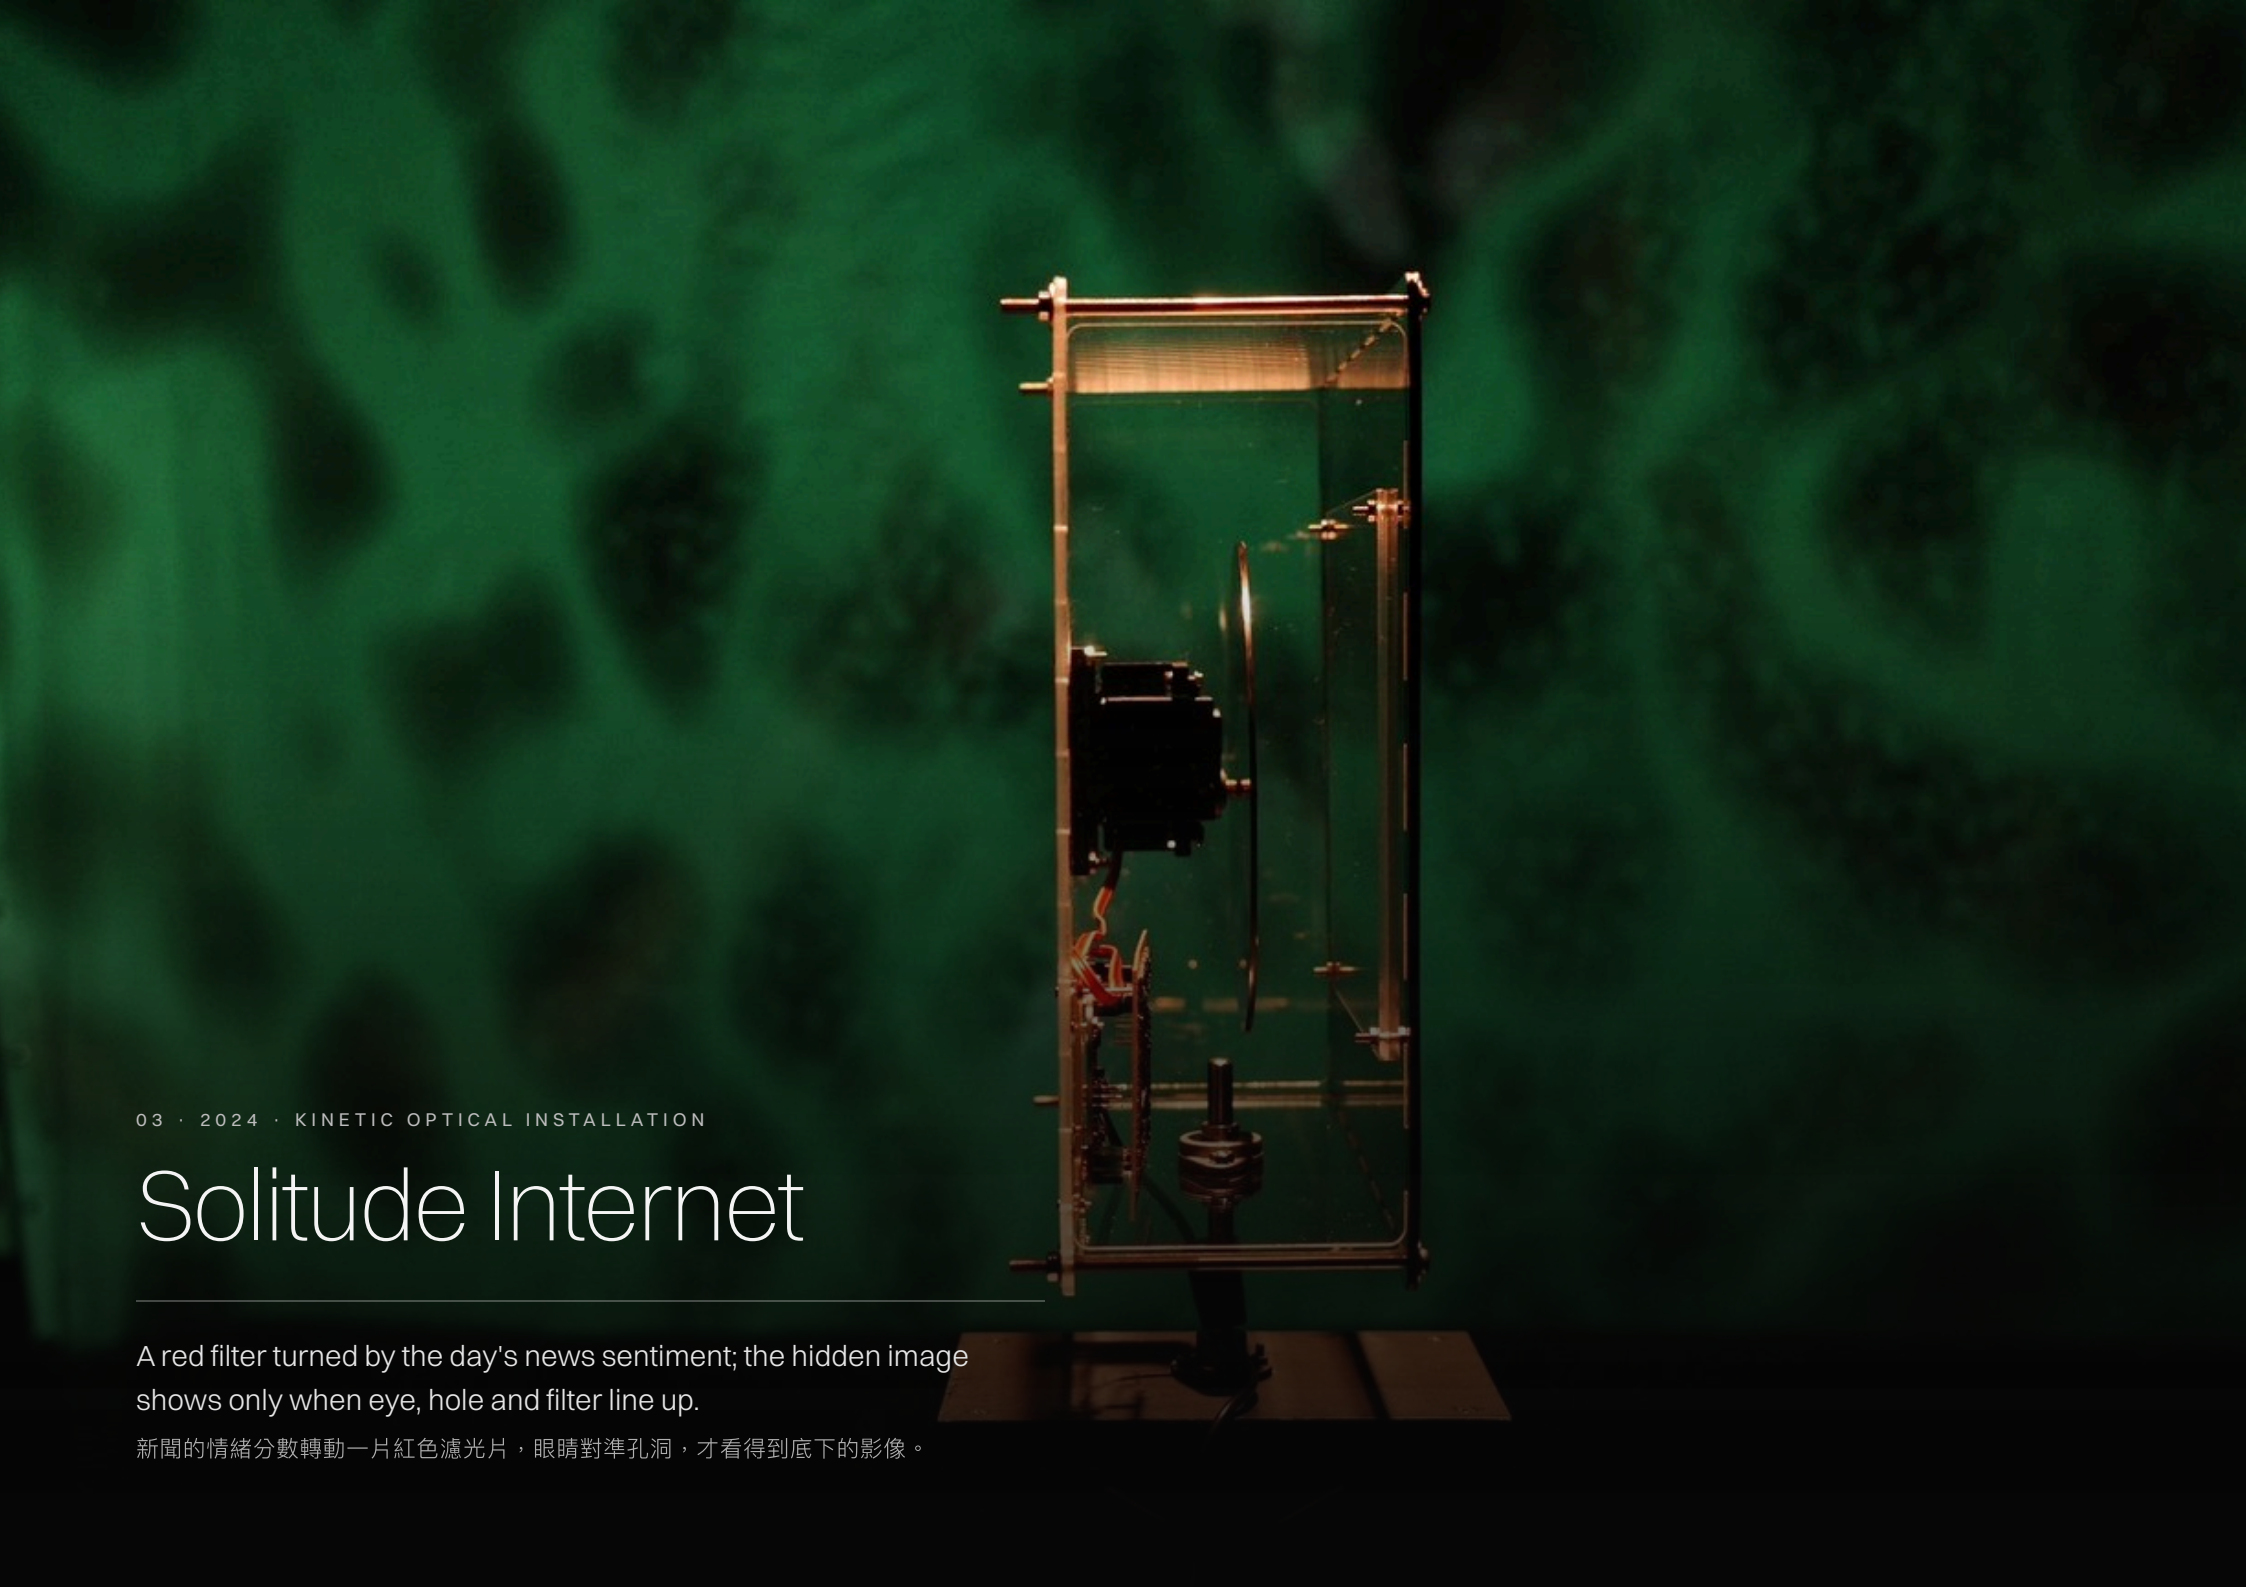

The 360° content inside the headset: my own fulldome opening from the 2024 Future Vision Lab showcase, replayed in a virtual dome.

The shell: a cardboard enclosure shaped around the head, actuators hidden in the wall.

Lying in, headset on: the visitor's own weight presses the ear against the sounding surface.

03 · 2024 · KINETIC OPTICAL INSTALLATION

Solitude Internet

A red filter turned by the day's news sentiment; the hidden image shows only when eye, hole and filter line up.

新聞的情緒分數轉動一片紅色濾光片，眼睛對準孔洞，才看得到底下的影像。

Solitude Internet

A red filter turned by the day's news sentiment; the hidden image shows only when eye, hole and filter line up.

新聞的情緒分數轉動一片紅色濾光片，眼睛對準孔洞，才看得到底下的影像。

Each day a script collects Taiwan's trending news headlines, runs sentiment analysis on them and reduces the result to one score. The score sets the angle of a servo, which turns a red filter inside a small box. The day's collective mood becomes a filter, turning slowly.

Two facing screens show two layers: green noise standing for too much information, and beneath it a red image of a bare body. To the naked eye there is only noise. A visitor has to move, bring an eye to the hole in the box and catch the moment the filter covers it; only then does the red image appear.

Filtering that software does in an instant is slowed down into an optical process you can watch, and miss. The Linz version was a wooden box; for Katowice it was rebuilt in clear acrylic so the mechanism shows. The ideas behind the piece were presented as a paper at ISAT 2024.

程式每天抓台灣的熱門新聞標題做情緒分析，算出當天的情緒分數，再用這個分數控制一顆伺服馬達，轉動小盒子裡的紅色濾光片。整個社會的情緒，就這樣變成一片慢慢轉動的濾鏡。

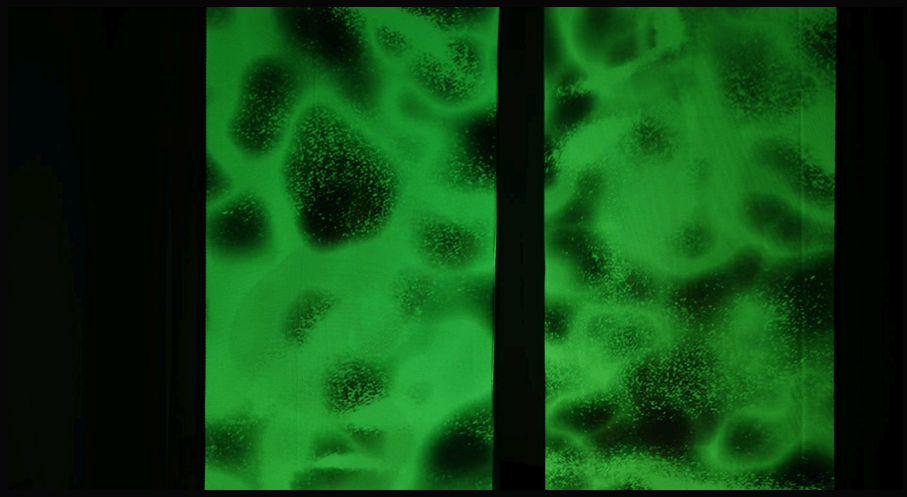

CONCEPT	BUILD	DATA	PAPER
Algorithmic filtering as a material boundary	Arduino Leonardo, MG996R servo, acrylic filter, two-layer projection	Google Trends scraper, translation, VADER sentiment (−1 to +1)	ISAT 2024, Taipei National University of the Arts

MEDIUM BOX WITH ROTATING RED ACRYLIC FILTER, SERVO, ARDUINO, TWO FACING PROJECTION SCREENS, LIVE NEWS SENTIMENT FEED

VERSIONS V1.0 WOODEN BOX 45 × 45 × 10 CM (LINZ) · V2.0 ACRYLIC BOX 27 × 27 × 7.5 CM (KATOWICE)

MADE WITH ONE CO-CREATOR; SHOWN HERE IS THE WORK AS EXHIBITED

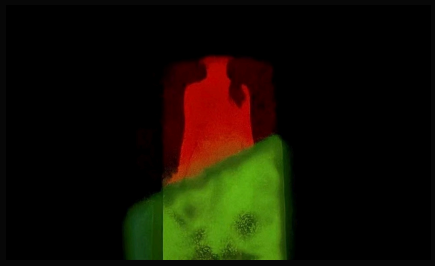

SHOWN 2024 ARS ELECTRONICA FESTIVAL CAMPUS EXHIBITION, POSTCITY LINZ — Anthropogenic Encroachment · NOV 2024 RONDO SZTUKI, KATOWICE — EUROPEAN CITY OF SCIENCE

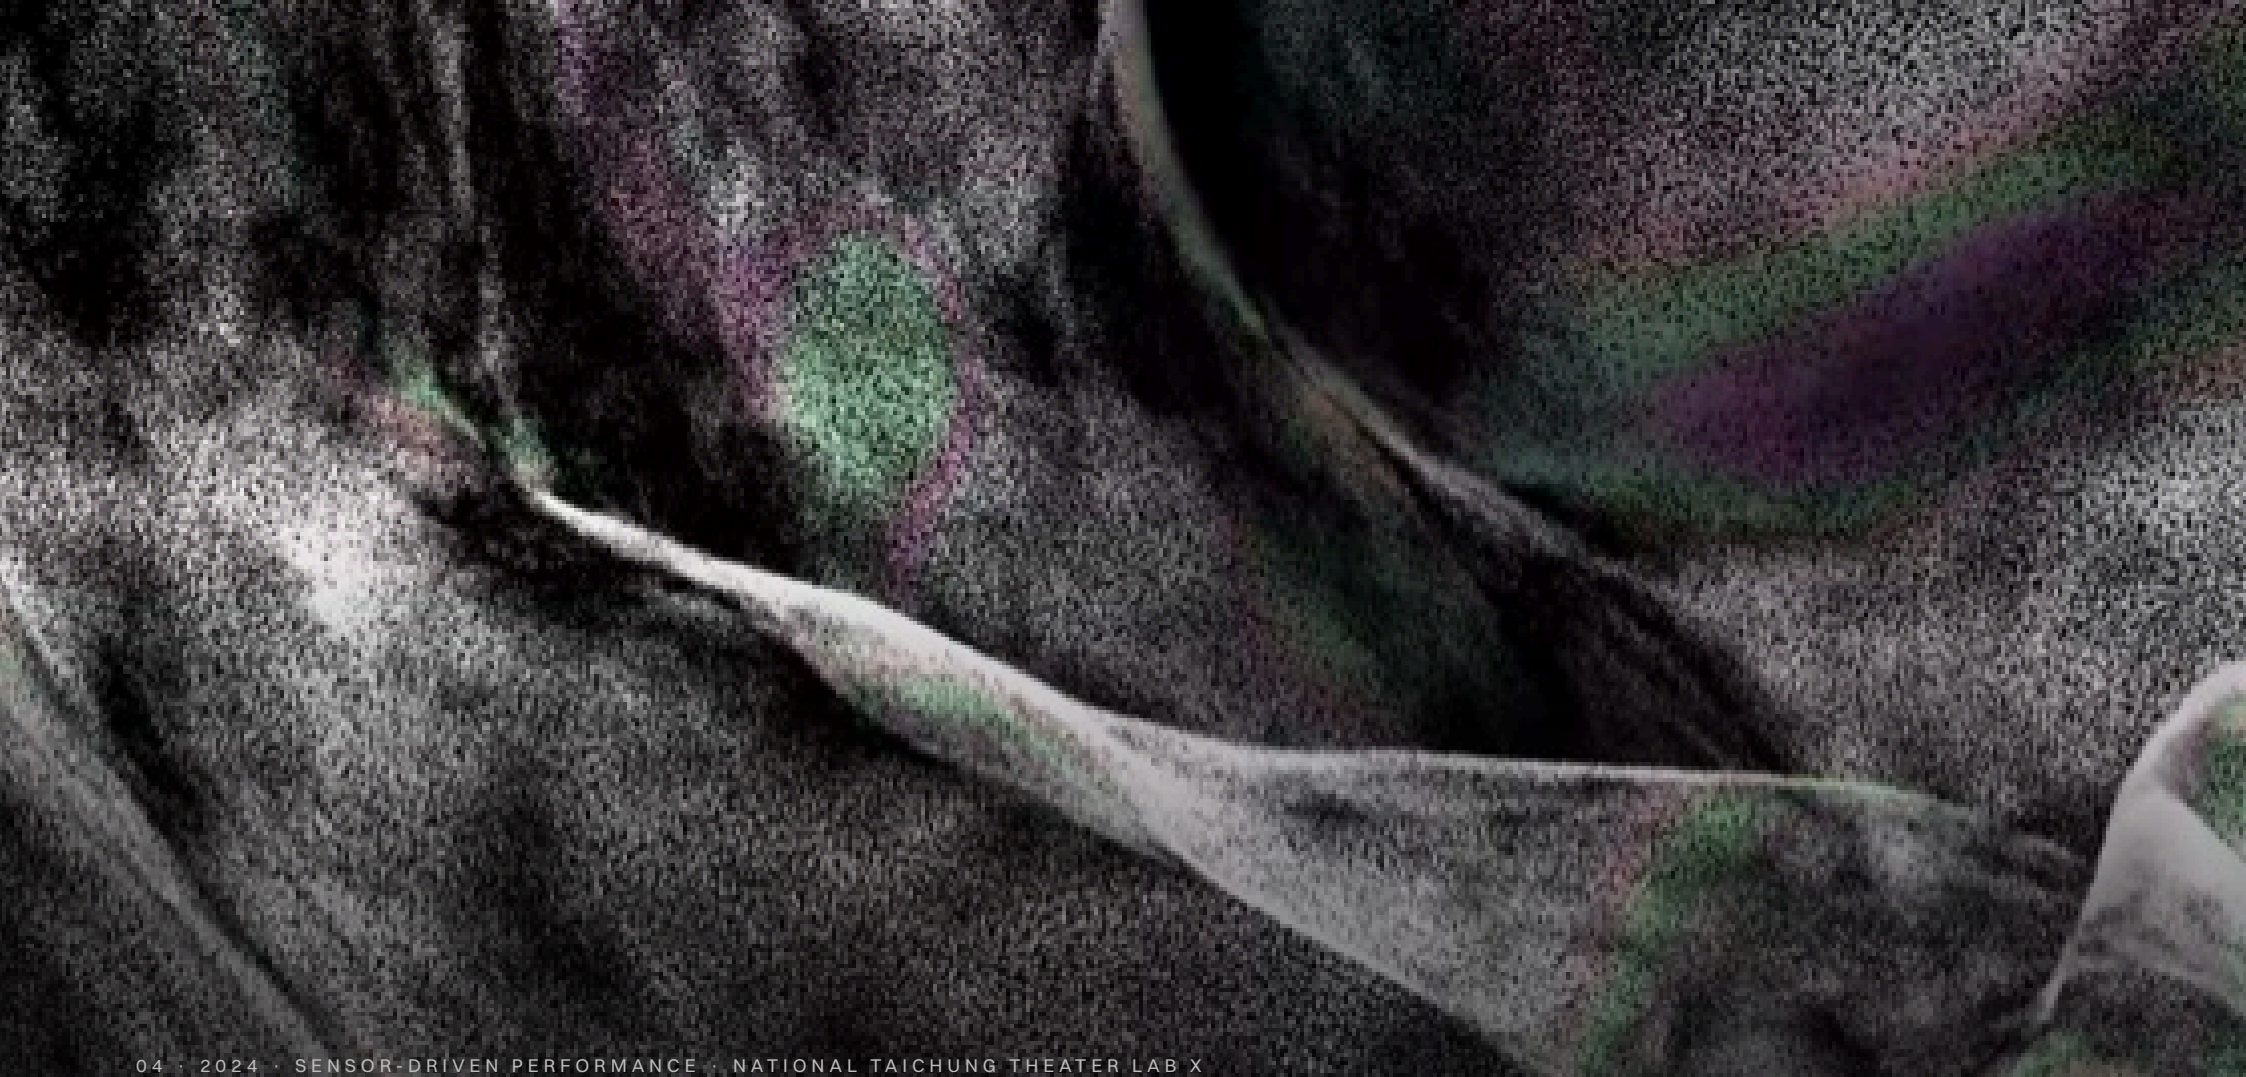

Two facing screens: green noise for information overload, the red body suppressed beneath it.

The red layer on its own: what the filter reveals when everything lines up.

Through the hole: the red body surfaces only when filter, hole and eye line up.

04 · 2024 · SENSOR-DRIVEN PERFORMANCE · NATIONAL TAICHUNG THEATER LAB X

Fu Pi

負 皮

A dance performance built around body sensing; I made the stage video.

一場以身體感測為主題的舞蹈演出，我負責舞台影像。

Fu Pi

A dance performance built around body sensing; I made the stage video.

一場以身體感測為主題的舞蹈演出，我負責舞台影像。

Fu Pi was selected for the National Taichung Theater's LAB X programme. It takes its cue from the Liaozhai tale *Painted Skin*, treats skin as a layer between the flesh and an online identity, and asks what is left of a body once sensors have read it. A dancer moves behind a translucent curtain while cameras read the outline, heat and skeleton of the body; the readings return to the stage as projected light.

My part was the stage video: every cue (0–7) on the dual-screen wall during the performance, made in TouchDesigner and Blender and timed to the dancer's sections.

The project ran from June to November 2024, with a public showing at the theater on 23 November.

《負皮》入選台中國家歌劇院 LAB X 計畫，取材自《聊齋》的〈畫皮〉。作品把皮膚想成肉身與網路身分之間的一層，想問身體被感測器讀過之後，還剩下什麼。舞者在半透明布幕後移動，攝影機讀取身體的輪廓、溫度與骨架，讀到的資料再化成光，投回舞台上。

MY PART	TOOLS	FORMAT	TEAM
The stage imagery — every video cue in the show	TouchDesigner, Blender	Dual screen, 3840 × 1080	Six members; sensing, dramaturgy and performance by the others

MEDIUM LIVE PERFORMANCE WITH BODY SENSING: DEPTH CAMERA, THERMAL AND SKELETON TRACKING, REAL-TIME PROJECTION, VR

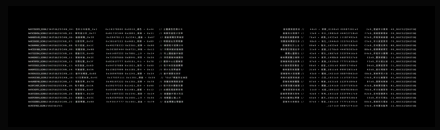

PROJECT TEAM OF SIX; SHOWN HERE IS THE STAGE IMAGERY I MADE

ROLE STAGE IMAGERY: THE FULL CUE SEQUENCE (CUE 0–7) FOR THE DUAL-SCREEN WALL, 3840 × 1080, BUILT IN TOUCHDESIGNER

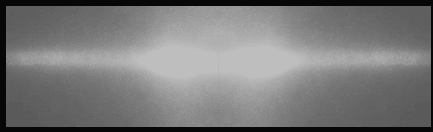

SHOWN 2024 NATIONAL TAICHUNG THEATER LAB X — "YOUNG ARTISTS' STUDIO: BODY SENSING" (SELECTED), WORK PERIOD JUN–NOV 2024, SHOWING 23 NOV 2024

Cue 3: the dancer's scanned body and its head, rebuilt as particles across the two screens.

Cue 3, text layer: the readings scroll as data columns.

Cue 4: a horizon of light across both screens.

Soundscape City

音景城市

Ten everyday recordings, built up into the image of a city.

十段日常錄音，堆成一座城市的影像。

Soundscape City

Ten everyday recordings, built up into the image of a city.

十段日常錄音，堆成一座城市的影像。

Ten recordings from daily life, among them wind on a sixth floor in Hsinchu, a Kaohsiung lighthouse and the sea at Nanliao harbour, are cut in Reaper and their percussive hits extracted. Each hit raises a block on a grid, and the sounds pile up into a city in TouchDesigner.

The system can also take spoken keywords: speech recognition picks out words and StreamDiffusion repaints the city from them, so recordings from different places and times end up in one picture.

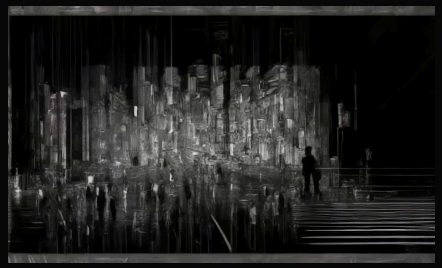

十段日常錄音，包括新竹六樓的風、高雄的燈塔、南寮漁港的海浪，先在 Reaper 裡剪出節奏點。每個節奏點在格狀地圖上升起一個方塊，聲音就這樣在 TouchDesigner 裡堆成一座城市。

SOUND	VISUAL	AI	PERIOD

Two VR spaces about personal data online.

兩個 VR 空間，關於網路上的個人資料。

Compound Eye of Technology

Two VR spaces about personal data online.

兩個 VR 空間，關於網路上的個人資料。

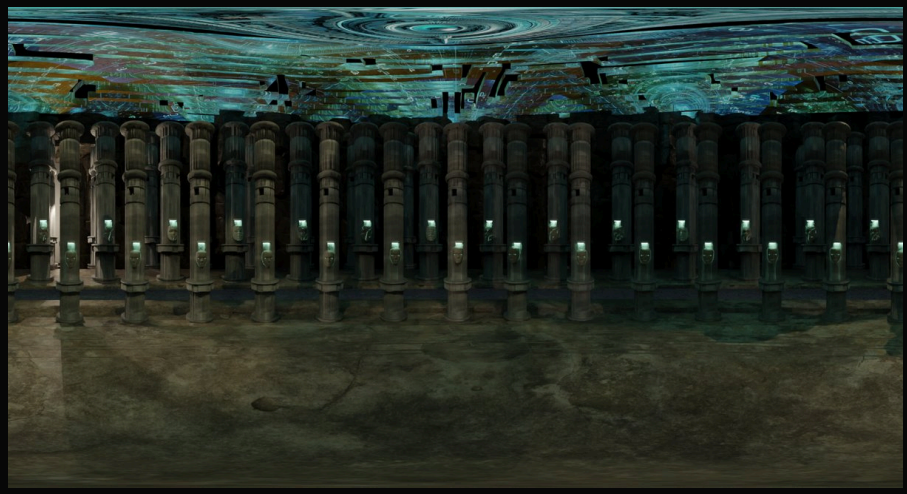

The piece treats each online account as an eye that collects points of view and passes them on. There are two spaces: a round hall built from symbols of personal and religious ties, and a mirrored room whose pillars stand for stored personal data.

At first the visitor can walk freely and choose where to look. As the scene changes, their position is fixed and their view becomes one of the screens in the room. The masked figures in the hall were modelled in Blender.

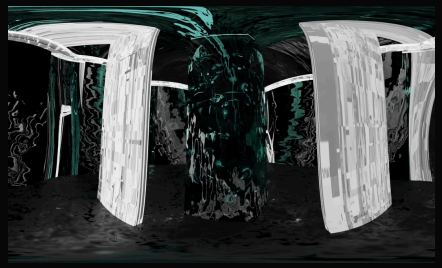

這件作品把每個網路帳號看成一隻眼睛，會收集觀點，也會把觀點傳出去。VR 裡有兩個空間，一個是由個人與信仰符號構成的圓形大廳，另一個是鏡面房間，裡面的柱子代表被存下來的個人資料。

Botanic

A generated plant that changes with the viewer's posture.

會隨觀者姿勢改變的生成植物。

A camera watches a person. Bend forward and the seedling stays low and droops; stand tall and it shoots up; open your arms and the branches spread wide and bloom. The plant is an L-system of six independent geometry classes (trunk, branches, nodes, leaves, flowers, petals) driven by three body readings: upright, arms, crouch.

The silhouette is reduced to a 32 × 24 grid and measured against the body's own bounds, so distance from the camera does not matter. Growth phase, branch angle, gravity and internode length are all written as expressions of those readings; a particle cloud resampled from the skeleton adds the haze.

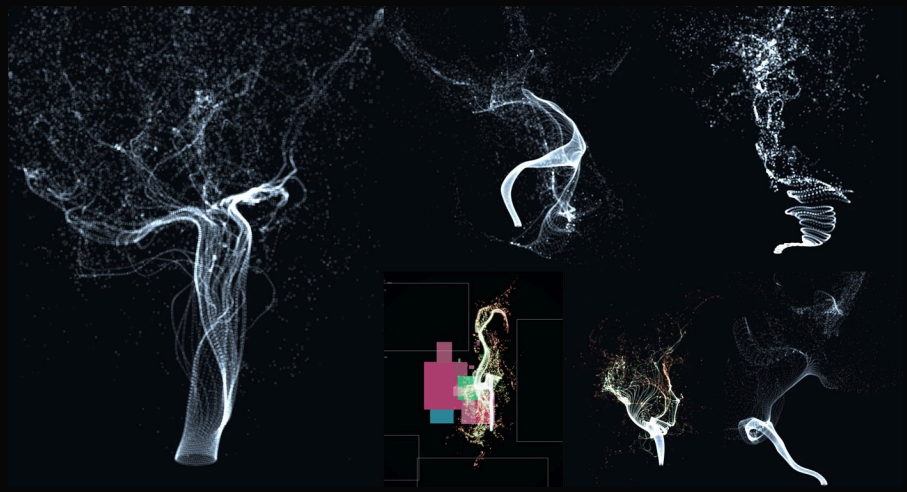

攝影機看著一個人。彎腰時，幼苗長得低、往下垂；站直時，它往上長；張開手臂，側枝就往兩邊展開、開花。植物是一套 L-system，由六種幾何（主幹、枝、節、葉、花、花瓣）組成，靠三個身體讀數驅動，分別是身體多直、手臂多開、蹲得多低。

ENGINE TOUCHDESIGNER 2025, POP PARTICLES, L-SYSTEM

ENGINE TOUCHDESIGNER, GLSL POP GENERATORS, CUBE-MAP → FISHEYE

FORMAT 1280 × 1280 FISHEYE, 235°, 60 FPS · 4096 × 4096 MASTERS

SCREENED FVL DOME SHOWCASE, C-LAB, DEC 2024 — PROGRAMME OPENING & ENDING

STATUS IN DEVELOPMENT, SEPT 2026

For the Future Vision Lab dome showcase in December 2024 I made the programme's opening and ending: a skin-like sphere that swells open, and a black hole that gathers the evening's particles back in at the close. Both played across the whole dome above the seated audience. I have kept working in the dome format since.

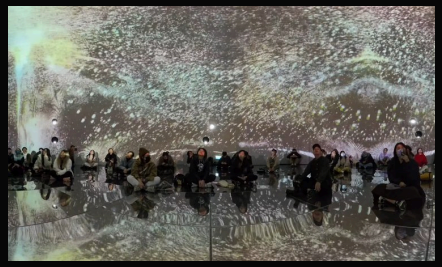

Since then I have built two systems for fulldome projection. The first is a 70-second loop that morphs between seven procedural geometries (rings, lattice, tunnel, wave, caustic, depth, spiral) every ten seconds. Because the dome is wider than a standard 180° lens, it is rendered through a cube map to a 235° fisheye.

The second is a particle study about emotional self-consumption. Particles contract toward a black centre, faster as they get closer, then spring back out, each cycle shorter than the last. Layered speeds, size tied to depth and a centre kept dark make the motion read as a pull inward.

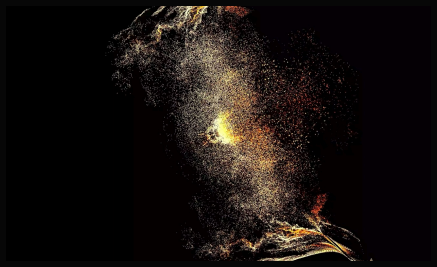

2024 年 12 月未來視覺實驗室的穹頂成果展，我做了整場的開場與結尾。開場是一顆像皮膚一樣膨開的球體，結尾是一個黑洞，把整晚的粒子收回去。兩段都投在觀眾頭頂的整面穹幕上。之後我一直持續在做穹頂影像。

The opening running in the dome, NTHU showing, December 2024 — 360° capture from the floor.

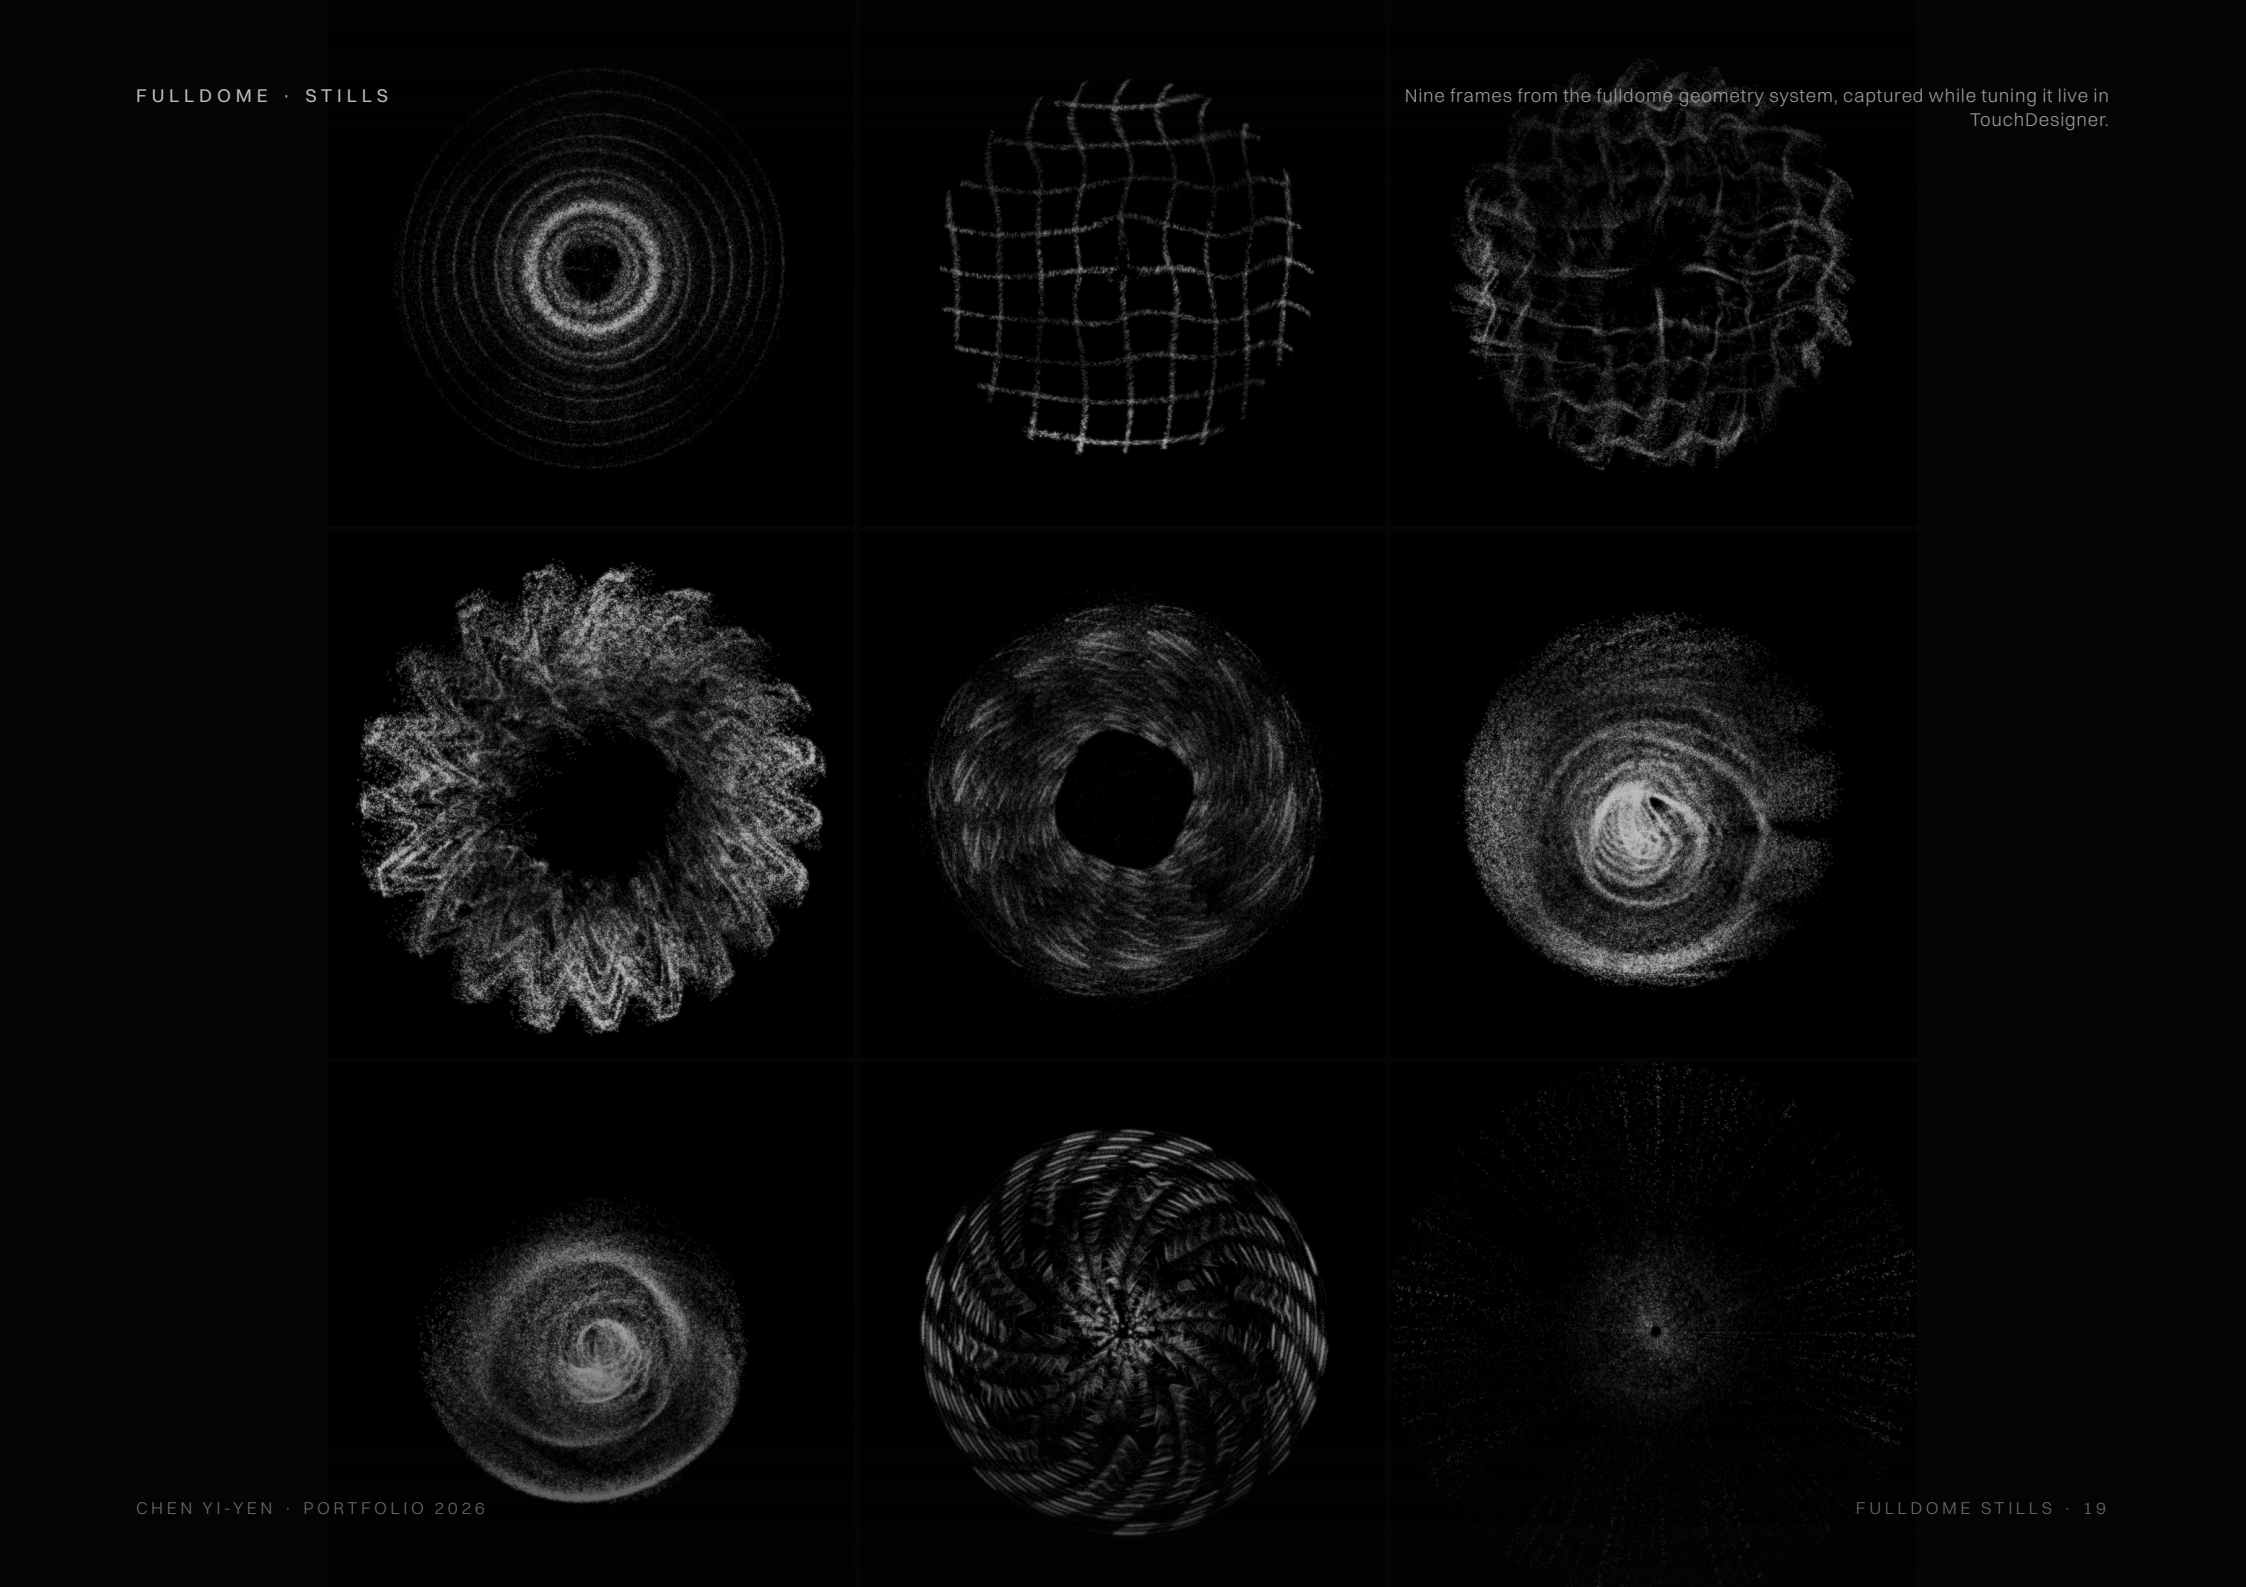

The ending: particles filling the whole surface.

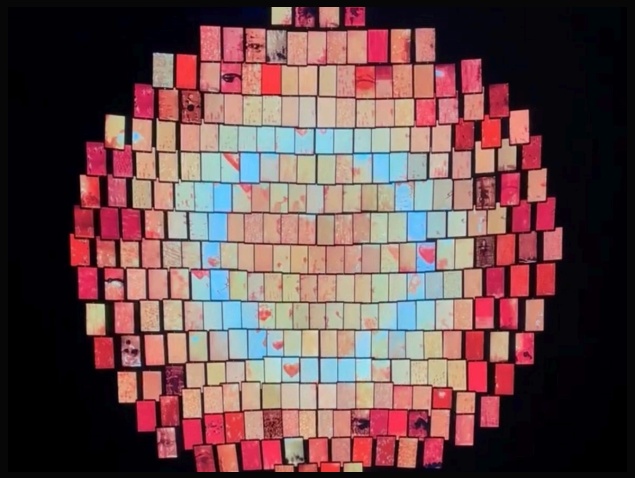

The same sequence as rendered: particles gathered into a black hole.

Nine frames from the fulldome geometry system, captured while tuning it live in TouchDesigner.
