Works 2020–2026

My MFA research comprised three works examining the physical conditions required for a message to be transmitted. The final work, Beacon Silence, transmits seven channels of sound through custom Li-Fi circuits and was exhibited at VA Hub, Taipei, in July 2026. Production work includes stage video for a theatre performance; the compiled programme, two fulldome pieces and the opening transition for a campus presentation at the Future Vision Lab showcase; image generation and installation for *Solar* in LuxuryLogico's solo exhibition at MoCA Taipei; and partial development and testing of the directional-speaker tracking system for *Echo Chamber* at the C-LAB Sound Art Festival. Primary tools: TouchDesigner, Blender and Premiere Pro.

碩士階段以三件作品探討訊息傳遞所需的物理條件。其中《Beacon Silence》以自製 Li-Fi 電路傳輸七聲道聲音，2026 年 7 月於台北 VA Hub 展出。另參與團隊作品及其他創作者作品的製作，包括劇場演出舞台影像、未來視覺實驗室穹頂成果呈現的全場影片統整、開場轉場與兩段穹頂作品、豪華朗機工台北當代藝術館個展中《日光域》的影像生成與布展，以及 C-LAB 聲響藝術節作品《回聲室》中指向性喇叭追蹤系統的部分開發與測試。常用工具為 TouchDesigner、Blender 與 Premiere Pro。

SKILLS

REAL-TIME & GENERATIVE

TouchDesigner (POP, GLSL), Unity, StreamDiffusion, fulldome pipelines, multi-screen playback

3D & PRODUCTION

Blender, Maya, 360°/fisheye rendering, stage and venue modelling, Premiere, Ableton Live

HARDWARE & SOFTWARE INTEGRATION

Arduino, custom PCB, sensors, lasers & Li-Fi, DMX, motorised mounts, camera tracking

PRODUCTION

Stage video for theatre, fulldome content, exhibition imagery and installation

01 · 2026 · INTERACTIVE SOUND INSTALLATION · LI-FI

Beacon Silence

Seven laser beams each transmit one part of a composition; when a beam is blocked, its part falls silent.

七道雷射各自傳輸一個聲部；光束被遮斷時，對應聲部隨之靜音。

Beacon Silence

Seven laser beams each transmit one part of a composition; when a beam is blocked, its part falls silent.

七道雷射各自傳輸一個聲部；光束被遮斷時，對應聲部隨之靜音。

Seven green laser beams cross a darkened corridor. Each beam carries one part of the same composition to a solar panel on the opposite wall, where it is converted back into sound. The piece is complete only when all seven beams arrive.

The work requires no deliberate interaction. On entering the corridor, a visitor's body interrupts one or more beams, and the corresponding parts drop out. There is therefore no ideal listening position; what each visitor hears depends on where they stand.

The more people present, the quieter the corridor becomes. When all seven beams are blocked, the space is full and the sound is gone. The work defines this state as fading rather than failure: the system continues to run, and what remains audible is silence.

七道綠色雷射橫越暗室走道，每道光束各自承載同一首樂曲的一個聲部，由對面牆上的太陽能板接收並還原為聲音。七道光束全部抵達時，樂曲才得以完整呈現。

SOUND 7-PART ABSTRACT COMPOSITION, 3′22″

ROLE CONCEPT, ELECTRONICS, COMPOSITION, SPATIAL DESIGN (SOLO WORK)

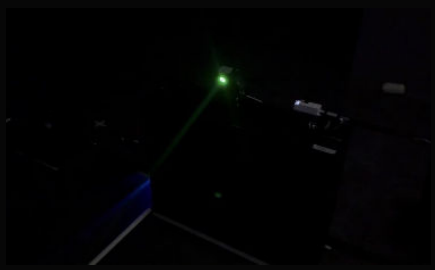

SHOWN Unseen Circuits, VA HUB, TAIPEI, 1–3 JULY 2026 · MFA THESIS WORK, NTHU

A visitor crossing the corridor intercepts successive beams, altering the mix with each step.

Standing, walking or crouching: any position in the space interrupts a beam.

Transmitter: 12 V green laser module modulated by the audio signal.

02 · 2025 · TACTILE SOUND / VR INSTALLATION

Paper Shell Echo

紙殼迴聲

A cardboard shell replaces the loudspeaker as the sounding body, paired with fulldome imagery in a VR headset.

以紙殼振動取代喇叭發聲，搭配頭戴式顯示器中的穹頂影像。

Paper Shell Echo

A cardboard shell replaces the loudspeaker as the sounding body, paired with fulldome imagery in a VR headset.

以紙殼振動取代喇叭發聲，搭配頭戴式顯示器中的穹頂影像。

Fulldome performances surround the audience with sound, yet the path the sound travels, from speaker to dome surface to seat, usually goes unnoticed. Paper Shell Echo reduces the dome to a cardboard shell; the visitor lies down with their head inside it.

The installation contains no loudspeaker. Linear resonant actuators embedded in the shell convert audio into vibration, so the cardboard itself becomes the sounding surface. Sound reaches the listener partly through the air and partly through the back of the head in contact with the shell.

The headset plays 360° content: two fulldome pieces produced for the 2024 Future Vision Lab showcase, played back in a virtual dome simulator.

穹頂展演以聲音包覆觀眾的身體，但聲音從喇叭、穹幕到座位的傳遞路徑通常不被察覺。《紙殼迴聲》將穹頂縮小為紙板殼體，觀眾躺臥後將頭部置於殼內。

Solitude Internet

A red filter rotated by the day's news sentiment; the concealed image appears only when eye, aperture and filter align.

依每日新聞情緒分數旋轉的紅色濾光片；唯有視線、孔洞與濾光片對齊時，被遮蔽的影像才會顯現。

Solitude Internet

A red filter rotated by the day's news sentiment; the concealed image appears only when eye, aperture and filter align.

依每日新聞情緒分數旋轉的紅色濾光片；唯有視線、孔洞與濾光片對齊時，被遮蔽的影像才會顯現。

A script collects Taiwan's trending news headlines each day, analyses their sentiment and reduces the result to a single score. The score sets the angle of a servo motor, which rotates a red filter inside a small box. The collective mood of the day becomes a slowly turning filter.

Two facing projection screens layer two images: green noise representing information overload, and beneath it a red image of a bare body. To the naked eye only the noise is visible. The red image appears only when the viewer aligns their eye with the aperture in the box at the moment the filter passes in front of it.

Algorithmic filtering normally happens instantaneously in software; this work slows it into an optical process that can be observed, or missed. The Linz version used a wooden box; for Katowice it was rebuilt in clear acrylic to expose the mechanism. The accompanying paper was presented at ISAT 2024.

程式每日擷取台灣熱門新聞標題並進行情緒分析，將結果換算為單一分數，以此控制伺服馬達的角度，轉動盒內的紅色濾光片。社會整體的情緒因此成為一片緩慢轉動的濾鏡。

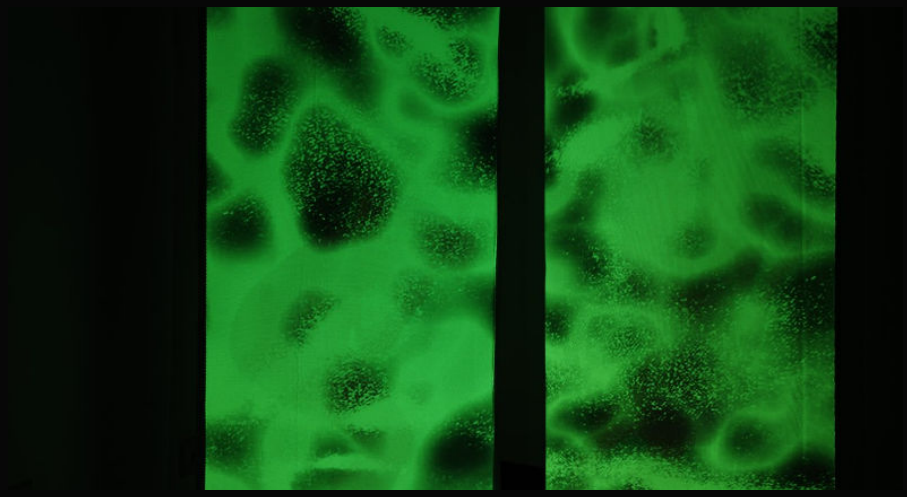

CONCEPT	BUILD	DATA	PAPER

Fu Pi

負 皮

A dance performance built around body sensing; responsible for stage video design and production.

以身體感測為主題的舞蹈演出；負責舞台影像的設計與製作。

Fu Pi

A dance performance built around body sensing; responsible for stage video design and production.

以身體感測為主題的舞蹈演出；負責舞台影像的設計與製作。

Fu Pi was selected for the National Taichung Theater's LAB X programme. Drawing on the Liaozhai tale *Painted Skin*, it treats skin as an interface between the physical body and online identity, and asks what remains of a body once it has been read by sensors. A dancer performs behind a translucent curtain while cameras capture the body's outline, heat and skeleton; the data returns to the stage as projected light.

Responsible for the stage video: all cues (0–7) on the dual-screen wall, produced in TouchDesigner and Blender and synchronised with the choreography.

The project ran from June to November 2024, with a public presentation at the theatre on 23 November.

《負皮》為台中國家歌劇院 LAB X 計畫入選作品，取材自《聊齋誌異》〈畫皮〉，將皮膚視為肉身與網路身分之間的介面，探問身體經感測器讀取後所留存的部分。舞者於半透明布幕後演出，攝影機擷取身體的輪廓、溫度與骨架資料，再轉化為投射於舞台上的光影。

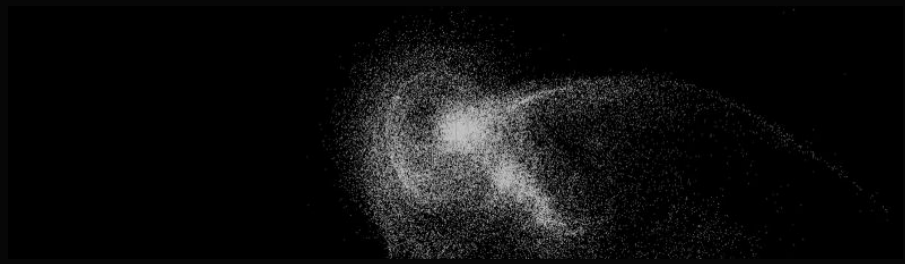

CONTRIBUTION	TOOLS	FORMAT	TEAM

Soundscape City

音景城市

A city image generated from ten everyday field recordings.

以十段日常錄音生成的城市影像。

Soundscape City

A city image generated from ten everyday field recordings.

以十段日常錄音生成的城市影像。

Ten everyday recordings, including wind on a sixth floor in Hsinchu, a lighthouse in Kaohsiung and waves at Nanliao Harbour, are edited in Reaper to extract their percussive onsets. Each onset raises a block on a grid, building up a city in TouchDesigner.

The system was also designed to accept spoken keywords: speech recognition extracts the words, and StreamDiffusion regenerates the city image accordingly, layering recordings from different times and places into a single image.

十段日常錄音，包括新竹六樓的風聲、高雄燈塔與南寮漁港的海浪，先於 Reaper 中擷取節奏點。每個節奏點在格狀地圖上生成一個量體，聲音由此在 TouchDesigner 中堆疊為城市。

以網路個人資料為題的雙場景 VR 作品。

Compound Eye of Technology

A two-scene VR work on personal data online.

以網路個人資料為題的雙場景 VR 作品。

The work treats each online account as an eye that both gathers and disseminates points of view. It comprises two spaces: a circular hall built from symbols of personal and religious attachment, and a mirrored room whose pillars represent stored personal data.

Initially the viewer moves freely and chooses where to look; as the scene changes, their position becomes fixed and their view becomes one of the screens within the room. The masked figures in the hall were modelled in Blender.

作品將每個網路帳號視為一隻眼睛，既收集觀點，也將觀點傳播出去。VR 中包含兩個空間：以個人與信仰符號構成的圓形大廳，以及以柱體代表被儲存之個人資料的鏡面房間。

以 3D 列印成形、由內部 LED 照明的雕塑。

Luminous Membrane

A 3D-printed sculpture illuminated from within by LED lines.

以 3D 列印成形、由內部 LED 照明的雕塑。

The work continues an observation of biological interaction, starting from the encounter between a person and a mosquito within personal space. The anthropologist Edward T. Hall divided the space around a person into four zones: public, social, personal and intimate. Personal space is controlled by the individual, and others need permission to enter. A mosquito, driven by the instinct to survive and reproduce, crosses into it; a person answers with a slap to restore order.

Luminous Membrane turns this invaded private zone into a glowing layer of flesh: in a wall of identical red modules, one holds a soft pink core lit from within, and lines of light extend outward from it to suggest infection and spread after the intrusion.

The core was sculpted in Blender, prepared for 3D printing and lit with Arduino-controlled LED lines. The wall images are renders; the photograph shows the printed piece.

作品延續對生物互動的觀察，從人與蚊子在「個人空間」裡的相遇出發。人類學家愛德華·霍爾（Edward T. Hall）將人周圍的空間分為公共、社交、個人與內部四個層次；個人空間由個體掌控，他人進入需要許可。蚊子出於生存與繁殖的本能闖入這個範圍，人則以拍打維持私密空間的秩序。

08 · 2022 · EXPERIMENTAL THEATRE · MEDIA × DANCE

The Infinite Depth

無盡深邃的那端

A dance performance combining a mirror installation with live projection.

結合鏡面裝置與即時投影的舞蹈演出。

The Infinite Depth

A dance performance combining a mirror installation with live projection.

結合鏡面裝置與即時投影的舞蹈演出。

A mirror installation receives the live projection and reflects it in fragments. The dancer interacts with and imitates their own afterimage before being replaced by it, while LCD screens carry a parallel narrative.

The narrative follows a person caught in rumour: how fragments of information on social media assemble an image that does not match them, and the self-doubt that follows.

鏡面裝置承接即時投影，並將其碎裂反射。舞者與自身殘影互動、模仿，最終被殘影取代；液晶螢幕同時呈現另一條敘事線。

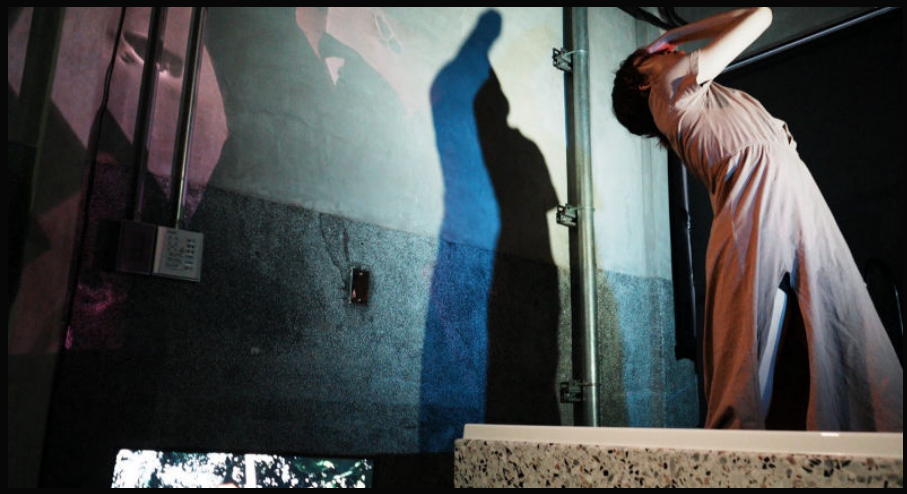

SPATIAL DESIGN	VIDEO	TEAM	VENUE

Botanic

A generative plant that grows according to the viewer's posture.

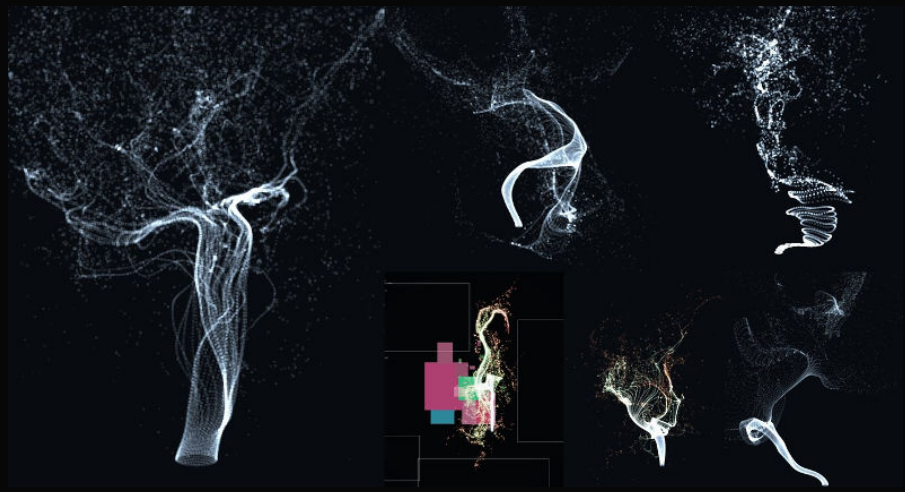

依觀者姿勢生長的生成植物。

ENGINE TOUCHDESIGNER 2025, POP PARTICLES, L-SYSTEM
INPUT WEBCAM SILHOUETTE, NUMPY POSE ANALYSIS
OUTPUT 1280 × 1280 ARTWORK + MONITOR VIEW
STATUS WORKING PROTOTYPE, SEPT 2026

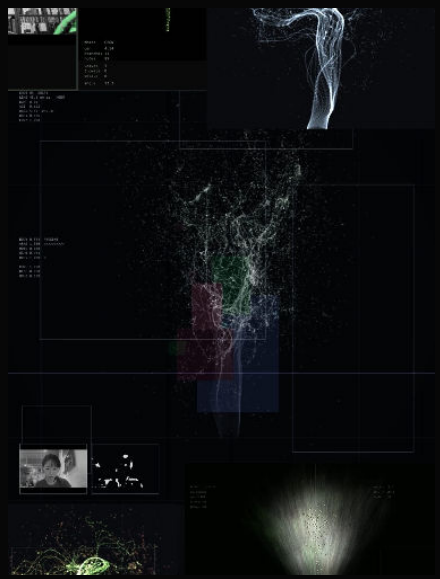

A camera tracks the viewer's posture: bending forward keeps the seedling low and drooping, standing upright makes it grow taller, and opening the arms spreads the branches into bloom. The plant is an L-system of six geometry classes (trunk, branches, nodes, leaves, flowers, petals) driven by three body readings: uprightness, arm spread and crouch.

The silhouette is downsampled to a 32 × 24 grid and measured relative to the body's own bounds, so distance from the camera has no effect. Growth stage, branching angle, gravity and internode length are expressed as functions of these readings; a particle cloud resampled from the skeleton forms the surrounding haze.

攝影機擷取觀者姿勢：彎腰時幼苗低垂，站直時向上生長，張開雙臂時側枝展開並開花。植物以 L-system 建構，由六類幾何（主幹、枝、節、葉、花、花瓣）組成，並由三項身體數值驅動：直立程度、手臂張開程度與蹲低程度。

Point-cloud passes and growth states: the skeleton resampled into particles, colour blocks where the body is read.

Working collage: camera, silhouette, live readings, plant states.

Bend · stand · arms open: the three postures and the plants they grow.

REAL-TIME STUDIES 2026 · S2 · FULLDOME GEOMETRY & PARTICLE SYSTEMS · 235° FISHEYE

Fulldome 2024–2026

Fulldome content for a 2024 campus presentation, and subsequent generative systems for the dome.

2024 年穹頂校園成果呈現的影像，以及後續的穹頂生成系統。

For the NTHU × Shih Chien University student presentation at Future Vision Lab 2024 (C-LAB Dome Theatre, 22 December 2024), a team production, compiled all participants' videos into the full programme and produced two fulldome pieces and the opening transition: a skin-like sphere that swells open, and a black hole that draws particles inward. Both pieces were projected across the full dome above the seated audience. Work in the fulldome format has continued since.

Two systems for fulldome projection followed. The first is a 70-second loop morphing between seven procedural geometries (rings, lattice, tunnel, wave, caustic, depth, spiral) every ten seconds. Because the dome exceeds a standard 180° lens, the image is rendered via a cube map and converted to a 235° fisheye.

The second is a particle study on emotional self-depletion. Particles contract towards a black centre, accelerating as they approach, then rebound outward, each cycle shorter than the last. Layered speeds, depth-dependent particle size and a dark centre give the motion a sense of inward pull.

於 2024 年未來視覺實驗室「清華大學藝術學院學士班 / 科藝所 × 實踐大學媒傳系成果呈現」（C-LAB 穹頂劇場，2024 年 12 月 22 日，團隊製作）中，統整全體參與者的影片成完整節目，製作兩段穹頂作品與開場轉場：其一為如皮膚般膨脹展開的球體，其二為將粒子收攏的黑洞，皆投映於觀眾上方的整面穹幕。此後持續進行穹頂影像的研究。

ENGINE TOUCHDESIGNER, GLSL POP GENERATORS, CUBE-MAP → FISHEYE
